

TALLINN UNIVERSITY

UNIVERSITY ENVIRONMENTAL STRATEGY

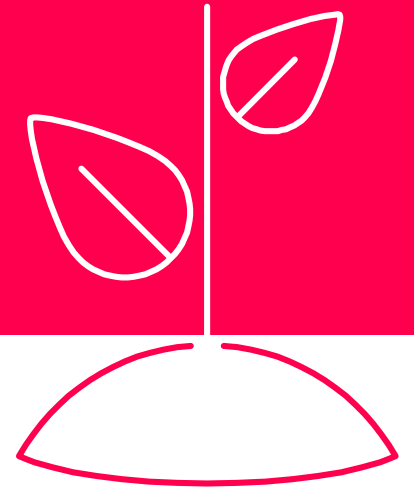

Hello!

I'm Heleri Soolmann

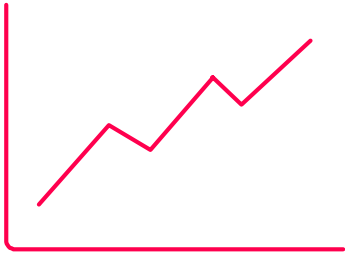

Environmental Management student

1. Environmental strategy

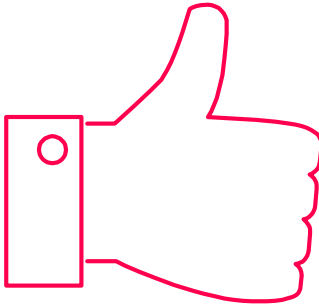

Strategy in UNIVERSITY

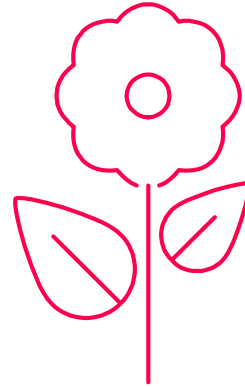

Why?

money

reputation

responsibility

Strategy in UNIVERSITY

How?

FORMAL

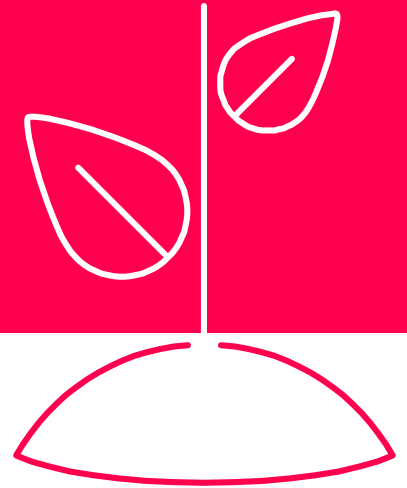

- ISO 14001 certification
- EMAS

NON-FORMAL

- EMS models for university (Osnabruck; South Carolina)
- Green office model
- Adjusted models

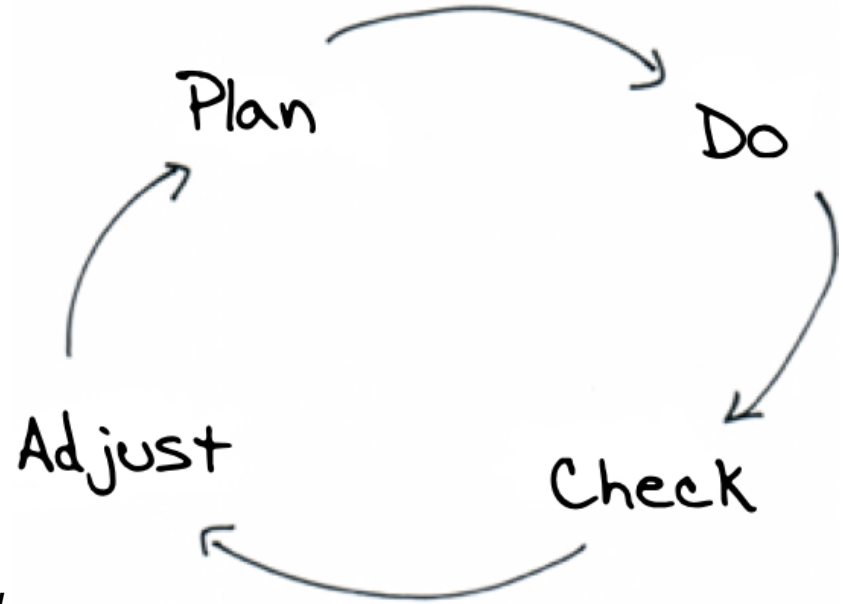

2.

Environmental Management System

Continuous cycle

- Policy development
- Aspect identification
- Goals and action-steps
- Auditing
- Improving

There are numerous ways of creating these elements.

3.

Green University

Tallinn University - Green University

Each one of us has an influence on the environment through the way we consume products and services based on natural resources. Our modern society consumes more of these resources than the Earth can provide and, as a result, we must pursue the principles of sustainable development.

Consequently, Tallinn University has joined the **Green Academic Footprint** initiative of the Network of Universities from the Capitals of Europe (UNICA) in order to participate in the process of making the principles of sustainable development part of everyday life. This strategic association brings us into close cooperation with opinion leaders, policy designers, communities, companies and other universities as we share green practices aimed at diminishing our ecological footprint. As centres for creating knowledge, universities have a unique opportunity, and indeed an obligation, to support and advise the community on social, cultural, economic and environmental issues. In this way, it is possible for the principles of sustainable development to be implemented in every area of society.

All members of Tallinn University have an opportunity to participate and set an example in this process of sustainable development for society.

See our video on 10 ways of being Green at TU

10 Green Recommendations

“

The university has an opportunity, bringing with it an obligation, to be a living laboratory in enhancing sustainable development.

Environmental policy

“

*Develop **sustainability**,
while integrating it to every **action**
in university management,
by **including** staff members,
students and partners.*

Goals

- Create **waste** sorting stations
- Calculating if **lighting** sensors would pay off
- Reducing the **temperature** by one degree
- Begin to support **interdisciplinary projects**

| Opportunities

- Environmental manager
- Student involvement
- Staff training
- Co-operation with partners
- Curriculum
- Interdisciplinary projects and internships
- Raising awareness

Thank you!
